I am writing to express my interest in the Decision Analytics Associate (India) position at your company. I heard about this position through a friend of mine who works at ZS Associates and am interested in this because I have always been biased towards learning about the analytical aspects of businesses. I have always followed a very interpretative approach of decision making and weighing the pros and cons of situations, be it work related issues or my own personal life. And if given the opportunity would love to do it full time at ZS Associates. Below contains a brief description of the work I have done so far.

For the last 1 year, I've been working with Cognizant Technology Solutions as a Programmer Analyst, in Chennai. As a Programmer Analyst at Cognizant, I am currently working on Cloud application development using Java and building new solutions based out of Cloud Foundry Components. In this project, we had to have a very clear idea of the requirements that the client had and for this process we had sit downs with share holders and investors which helped us to have an accurate idea regarding the business requirements based on which we drafted our designs. I have hands on experience in Spring Boot Applications and am well informed about the the various PAAS platforms today having worked extensively in them, like Cloud Foundrys Pivotal, IBM Bluemix, Microsoft Azure to be naming a few. I have undergone a rigorous 3 month training in the Cognizant Academy, post which my duties were: Design and Programme Analysis, Programming in Java and Programme Testing and Maintenance. But most importantly I received various Organizational and Behavioral Trainings with stress on proper etiquette and client behavior, which made us well prepared for the corporate world.

Prior to Cognizant, I had a brief but a very interactive stint of 4 months as a Marketing Executive for Delhi region in Varun Beverages Limited which is the 3rd largest manufacturer and distributor of Pepsi in Asia. This experience gave me an insight into the hardcore sales and marketing aspects of an organization. Thanks to this experience, I had the privilege of meeting clients in person and had a one on one interaction with them regarding their needs and demands and learned valuable negotiating skills in managing customer relationships. It also enhanced my team management skills as I was directly accountable for my teams performance in the various areas and thus also improved my team coordination as well as people skills.
The one aspect where I benefited the most because of this job was the hands on experience that I got to anchor the marketing of live events from scratch such as India International Trade Fair 2016 at Pragati Maidan, Durga Pooja at C.R Park New Delhi etc.

Apart from the above mentioned experiences that might help you to judge my skills, I also bring the following skills & technical abilities to the table:

- Excellent written and oral communication skills
- Good team management and coordination skills having participated and winning quite a few team sport activities such as basketball and football throughout my college as well as school life.
- In-depth understanding of Spring Boot Applications in Java
- Solid knowledge of the latest technologies and applications having worked in technologies such as Web Base Micro Services Applications, Mongo DB and Core Java, API Server and Cloud application Deployment integration.

I have attached my resume along with this application. I am hopeful that you would consider my candidature for this position and give me an opportunity of a personal interview.
